No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

(GETH) GENENTECH INC. Wang Y, Spellman MW;

WPI; 1998-437477/37. N-PSDB; AAV65632 Human O-fucosyl:transferase able to glycosylate epidermal growth factor domains - useful for diagnosis and treatment of diseases involving overexpression of the enzyme.

Example 1; Fig 12A; 90pp; English.

This represents a human heart O-fucosyltransferase that can glycosylate an epidermal growth factor (EGF) domain of a polypeptide with an activated O-fucose residue. Inhibitors of O-fucosyltransferase, e.g. mutants with increased affinity for the EFG domains, are used in diagnosis and treatment of conditions associated with overexpression of O-fucosyltransferase, to promote survival of sensory (retinal) neurons. Probes based on EGF domain polypeptide are used to detect gene

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are oversxpressed in cancer tissues compared to normal tissues, and may thus convexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide of sequences at least 80% identical to the TAT mucleic acids and complexition and polypeptides, expression vectors and host cells comprising and mit body specific for a TAT polypeptide; fusion proteins comprising a confidence in mammals. TAT polypeptides, motering comprising and proceed in mammals. TAT polypeptides, mucleic acids, antipodies, antagonists, binding molecules and compositions are useful antipodies, antagonists, binding molecules and compositions are useful concersed that expression, particularly cancers such as breast cancer, increased TAT expression, particularly cancers such as breast cancer, cancer, panceatic cancer, lung cancer, oavarian cancer, liver cancer, bladder cancer, lung cancer, oavarian cancer, cancer of the central cancer, lung cancer, oavarian cancer, cancer of the central cancer, bancatic cancer, cervical cancer, cancer such any further be curved as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence the cancer and the cancer and compared the cancer and cancer and cancer and compared and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                 domain of a polypeptide with an activated O-fucose residue. Inhibitors of O-fucosyltransferase, e.g. mutants with increased affinity for the EFG domains, are used in diagnosis and treatment of conditions associated with overexpression of O-fucosyltransferase, to promote survival of sensory (retinal) neurons. Probes based on EGF domain polypeptide are used to detect gene amplification and expression. The expression can also be determined at the protein level using antibodies specific for O-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAKE2581), 2111 (AAKE2582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce
                                                                                                                                                                                                                                                                                         Human, cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Z.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The invention relates to polymuclectides (AAK51456-AAK53435) and the encoded polypeptides (AAW78323-AAM89302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity indual may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               173

                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28 DPNGYLTYCPCMGRFGNQADHFLGSLAFAKALNRTLILPPWVEXR--RGELRSRQVPFNT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                             This represents a published partial human sequence of unknown function from a myeblast cell line. The invention provides a human heart Ofucosyltransferase enzyme that can glycosylate an epidermal growth factor (EGF) domain of a polypeptide with an activated Ofucose residue. Inhibitors of Ofucosyltransferase, e.g. mutants with increased affinity for the BFG domains, are used in diagnosis and treatment of conditions associated with overexpression of Ofucosyltransferase, to promote polypeptide are used to detect gene amplification and expression. The expression can also be determined at the protein level using antibodies specific for Ofucosyltransferase

AAD07571-AAD07645 represent cDNAs corresponding to 25 human secreted protein genes, and AAE03122 represent the proteins they encode. AAE03127-AAE03150 represent the proteins they encode. AAE03127-AAE03150 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, creating or amellorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the and include developing products for the diagnosis or treatment of the and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, Calbergies, neurological disorders (e.g., Alzheiner's disease, allergies, neurological disorders (e.g., Alzheiner's disease, Parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin
                                                                     Human, secreted protein, proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; ALDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; exim disorder; psortiasis; sepais; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; programoy-related disorder; gene endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; chromosome 3; binding partner identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding 25 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. Gaucher's disease, Alzaheimer's disease, Scimitar syndrome, Creutzfeldt-Jacob disease, diabetes mellitus and multiple sclerosis.
                                      Human gene 18 encoded secreted protein HMWEY26, SEQ ID NO:144.

disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, fidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound carding and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemctaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a procein of the invention can be used in diagnostic immunosasys e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human in secreted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                              206 HLVRPYVGIHLRIGSDWKNACAMLKDGTAGSHFMASPQCVGYSRSTAAPLTMTMCLPDLK 265

The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders activity. The protein is useful for treating and diagnosing disorders disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), hemancopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      albumin fusion protein; cytostatic; antianaemic; antiarthritic; antiasthmatic; anti-HIV; immunosuppressive; antiinflammatory; antipsoriatic; antibacterial; osteopathic; dermatological; antigout; immunomodulator; antiarrhythmic; cardiant; nootropic; antilipaemic; nephrotropic; uropathic; neuroprotective; antiparkinsonian; tranquilizer; antidiabetic; anabolic; hypertensive; vulnerary; gene therapy; cancer; reproductive system disorder; therapeutic protein.

, treating, prevent anemia, arthritis, New albumin fusion proteins, useful for diagnosing, treatior ameliorating diseases or disorders e.g. cancer, anemia. asthma, inflammatory bowel disease or Alzheimer's disease.

Disclosure; SEQ ID NO 366; 279pp; English

c. The invention relates to a nowel albumin fusion protein no further relates to: a composition comprising the albumin fusion protein and a pharmaceutical carrier; a kit comprising the albumin fusion protein and a pharmaceutical carrier; a kit comprising the ambumin fusion protein a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: A or its fragment or variant; a method of extending the shall life of Therapeutic protein: X or its fragment or variant; a method of the albumin fusion protein; and a host cell or method of extending the albumin fusion protein; and a host cell or motieic acid molecule of the albumin fusion protein. The and its compositions have the following comprising the and its compositions have the following cultivatives: cytostatic, antihalmanent, antiporiatic, antihacterial, steppositic, dermatological antification; manupoupprosestive, antihalmanent, antihalmanent, antiporiatic, antihacterial, steppositic, dermatological antigon, transing protein moleic card may be used in gene therapy to treat disorders. The albumin fusion protein mucieic acid may be used in gene therapy to treat disorders. The albumin fusion protein cultured in disorders comprising indication; bone, breast, liver or lung cancer), immune of hematopoietic diseases (e.g. anaemia, Hodgkin's disease or disorders include:

C cancer (e.g. leuksemia, colon, bone, breast, liver or lung cancer of useful for disponsing, treating, preventing or ameliorating disease or disorders muciein disease, parameter, antipore meaning, multiple myelom, arthritis, stehm, Albian, autoimmune disease, protein disease, or disorders include disease, system disease (e.g. anaemia, Hodgkin's disease or disorders in multiple myelom, arthritis, stehm, Albian, autoimmune disease, parameter, proponetrial disease, system diseases (e.g. giant cell tumours) and disease, parameter, protein d invention relates to a novel albumin fusion protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This represents a the N-terminal sequence of the human heart O-fucosyltransferase that can glycosylate an epidermal growth factor (EGF) domain of a polypeptide with an activated O-fucose residue. Inhibitors of O-fucosyltransferase, e.g. mutants with increased affinity for the EFG domains, are used in diagnosis and treatment of conditions associated with overexpression of O-fucosyltransferase, to promote survival of sensory (retinal) neurons. Probes based on EGF domain polypeptide are used to detect gene amplification and expression. The expression can also be determined at the protein level using antibodies specific for O-fucosyltransferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

This represents the N-terminal sequence of CHO O-fucosyltransferase. The enzyme can glycosylate an epidermal growth factor (EGF) domain of a polypeptide with an activated O-fucose residue. Inhibitors of O-fucosyltransferase, e.g. mutants with increased affinity for the EFG domains, are used in diagnosis and treatment of conditions associated with overexpression of O-fucosyltransferase, to promote survival of sensory (retinal) neurons. Probes based on EGF domain polypeptide are used to detect game amplification and expression. The expression can also be determined at the protein level using antibodies specific for O-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, nucleic acid-associated protein, NAAP; gene therapy; microarray; proliferative disorder; developmental disorder; cardiovascular disorder; neurological disorder; autoimmune disorder; inflammatory disorder; atherosclerosis; bursitis; cirrhosis; hepatitis; psoriasis; cardioral; lymphoma; melanoma; brain cancer; brast cancer; Cushophoma; melanoma; brain cancer; brast cancer; cardiorasis; syndrome; alcheimer's disease; AlDS; Creutzfeldt-Jakob disease; acquired immunodeficiency syndrome; Goodpasture's syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human O-fucosyl:transferase able to glycosylate epidermal growth factor domains - useful for diagnosis and treatment of diseases involving voverexpression of the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3 AGSWDPAGYLLYCPCMGRFGNQADHFLGSLAFAKLLNRTLAVPPWIEYQHHKPPFTNLH 61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3 AGSWDLAGYLLYXPXMGRFGNQADHFLGSLAFAKLXVRTLAVPFWIEYQHHKPPFTNLH 61
O-fucosyltransferase; epidermal growth factor; EGF; glycosylation; O-fucose; inhibitor; sensory neuron; retinal neuron; human.

The invention relates to an isolated human nucleic acid-associated protein (NAAP), comprising the protein sequences appearing as ABG95644-CC protein (NAAP), comprising the protein sequences appearing as ABG95644-CC protein immunogenic or biologically active fragment. Also included are the NAAP encoding polynucleotides, a recombinant NAAP polynucleotide, a call transformed with the recombinant NAAP antibody, correning compounds as modulators or ant/agonists of NAAP antibody, correning compounds as modulators or ant/agonists of NAAP antibody, correning compounds as modulators or ant/agonists of NAAP or modulators or nucleotides of the NAAP polynucleotides and generating an expression profile of a sample that contains NAAP polynucleotides and generating an disease or condition associated with decreased expression of functional NAAP. The antagonist is useful for treating a disease or condition associated with the expression of functional NAAP. The antibody that specifically binds to the polypeptide is useful for diagnosing a condition or disease to the polypeptide is useful for diagnosing a condition or disease corrected with the expression of NAAP. These diseases include the polypeptide is useful for diagnosing a condition or disease or inflammatory disorders. These polypeptides, polynucleotides, agonists and antagonists may also be used for preventing these diseases. These and antagonists may also be used for preventing these diseases. These conditions associated with circle of the proventing these diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             syndrome (AIDS), Creutzfeldt-Jakob disease, Goodpasture's syndrome, Crohn's disease, or multiple sclerosis and many other diseases and conditions listed in the specification. The present sequence represents

The invention useful in developmentel biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG175, ABLIG175) and the encoded proteins (ABBS7737-ABBS7072). The sequence data for this patent did not form part of the

The present invention relates to a method for identifying a compound that inhibits the activity of a protein essential for Drosophila viability. The method comprises: (a) expressing in a recombinant host a DNA sequence encoding a protein essential for Drosophila viability, (b) testing compounds suspected of having the ability to inhibit the activity of the protein expressed in (a); and identifying a compound tested in identifying a compound that inhibits the activity of the protein. The method is useful in identifying a compound that inhibits the activity of a protein essential for brosophila viability, antihelminthic or acaracidal ectoparasiticidal, antihelminthic or acaracidal agent. The present sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 16,

US-09-270-767-28905/c
Sequence 28905, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
PAPLICANT: Homburger et al.
TITLE OF INVENTION:
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
TITLE OF INVENTION: NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 28905
LENGTH: 998

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Catalyzes the reaction that attaches fucose through an O-glycosidic linkage to a conserved serine or threonine residue in EGF domains (BP similarity).
-!- CATALYTIC ACTIVITY: Transfers an alpha-L-fucosyl residue from GDP-beta-L-fucose to the serine hydroxy group of a protein acceptor.
                                                                                                                                                                                                                                                                                                                   1 RLAGSWDLAGYLLYXPXMGRFGNQADHFLGSLAFAKLXVRTLAVPPWIEYQHHKPPFTNL

Glycobiology 6:837-842(1996).
-!- FUNCTION: Catalyzes the reaction that attaches fucose through an
O-glycosidic linkage to a conserved serine or threonine residue in
EGF domains.
                                                                                                                 -!- CATALYTIC ACTIVITY: Transfers an alpha-L-fucosyl residue from GDP-beta-L-fucose to the serine hydroxy group of a protein acceptor.
-!- COFACTOR: Manganese.
-!- PATHWAY: GJYCOSYJation.
-!- ALTERNATIVE PRODUCTS:
EVENTE-Alternative splicing; Named isoforms=2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Potential.
GDP-fucose protein O-fucosyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Gaps
                                                                                                                                                                                                                                                                                                                                                                       Isold-09H488-2; Sequence=VSP 001809;
Note=No experimental confirmation available;
Note=No experimental confirmation available;
1-TISSUE SPECIFICITY: Highly expressed in heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas.
-:- SIMILARITY: Belongs to the glycosyltransferase 68 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N-linked (GlcNAc. . .) -!- FUNCTION: Catalyzes the reaction that attaches fucose through an O-glycosidic linkage to a conserved serine or threonine residue in BGF domains (By similarity).

-!- CATALYTIC ACTIVITY: Transfers an alpha-L-fucosyl residue from GDP-beta-L-fucose to the serine hydroxy group of a protein acceptor.

-!- COFACTOR: Manganese (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Uncte-"Site 1: Sall; Site 2: BamHI; CDNA library was prepared and sequenced in Mouse Genome Encylopedia Project of Genome Exploration Research Group in Riken Genomic Science Leaboratory in RIKEN. Division of Experimental Animal Research in Riken Contributed to prepare mouse tissues. lst strand CDNA was primed with a primer [5, GAGGAGAGAGATCCAAGAGCTCTTTTTTTTTTTVN 3'], CDNA was prepared by using trehalose thermo-activated reverse transcriptuse and subsequently enriched for full-length by cap-trapper. CDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 459.0. Second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /tissue_type="spinal cord"

s'-pdACTAGTTCAGATCGCGGCCCCCTTTTTTTTTTTTTTTT-3'] from 0.2 ug of total RNA, treated with T4 DNA polymerase, and 0.2 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The CDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the CDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-5. The products were purified by phenol/chloroform and Centricon 100. The CDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method: The average insert size is about 2.2 kb. The library was constructed by Yulan Piao (NIA)."
